Science – Animals and Humans

I understand the difference between vertebrates and invertebrates

A **vertebrate** is the name given to any living thing that has a back bone or spine. Some creatures do not have a back bone and are called **invertebrates**. Some examples of invertebrates are ants, spiders, snails, worms and jellyfish. Look at the animals bellow and tick the ones you think are **invertebrates**.

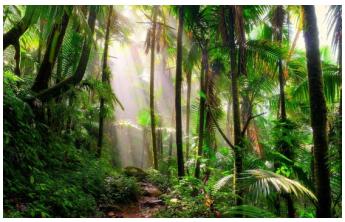

What other examples can you think of?

Geography I can identify different climates

The world is made up of different climates depending on how near or far places are from the equator. Can you find the equator on a map of the world? Label the different types of climates below.

tropical rainforest desert polar

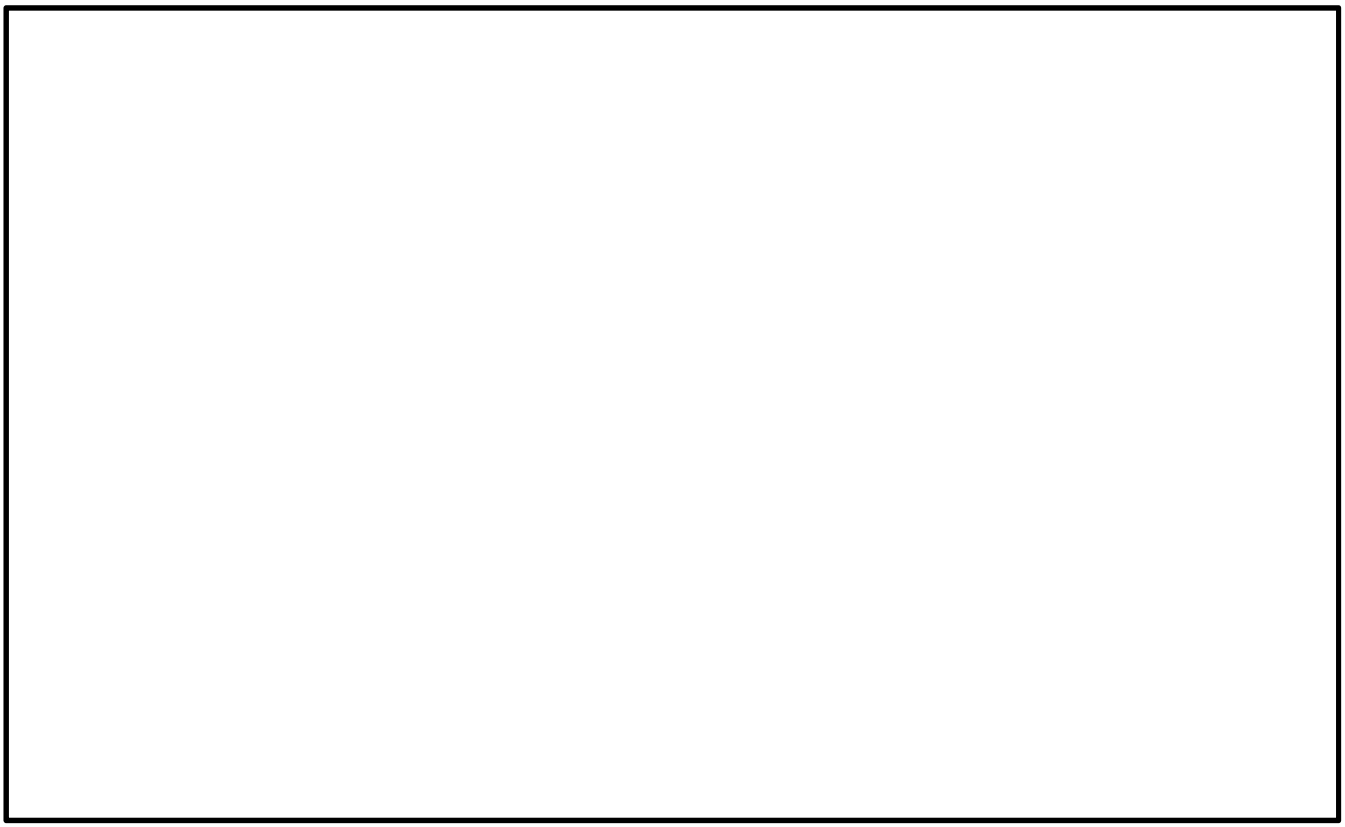

PSHE - Relationships

I can talk about how to make people happy.

Draw a picture of you helping a friend who is sad.

What would you do to cheer up your friend if they are feeling sad?

Music

See if you can find the song "The Animals went in 2 by 2" on youtube.

What sounds and actions could you add to the song?

Art

If you have paint, have a go at creating an animal picture using hand and finger printing.
